

The Maritech Group

Mapping and Digital Services Ltd

Mapping and Digital Services Ltd (MDSL) was formed to provide specialist Data Processing and Digitising services to companies that may not possess such a facility, or act as an overflow for those that do.

As a totally independent Geophysical and Survey Consultancy, with experts in a variety of processing systems, the organisation is well positioned to handle client acquired data right through from offshore gathering and Q.C. to final processing, analysing and reporting.

Confidentiality of data is assured with each client's data being handled in discreetly separate areas, which only the client and MDSL personnel can access via the latest high-tech security.

The client has access to their data at all times.

Data processing systems include:

CODA, Micromax, Promax, Lookout, Swathe Bathymetry as well as most navigational and processing software in use today. Whilst not specified, MDSL can handle most data types from offshore projects, including data acquired on outdated equipment.

For unusual requests or to enquire about a specific data type the MDSL office should be contacted whereupon our experts will gladly provide advice and a quotation if requested.

DATA TYPES INCLUDE:

- Digital seismic data
- Side scan and sub-bottom data
- Magnetometer data
- Swathe Bathymetric data
- Navigational data
- Geotechnical data

With close ties to software/processing manufacturers, MDSL is able to assist with future developments and able to keep abreast of changes as they occur.

For any data processing enquires please contact:
